TO WHOM SO EVER IT MAY CONCERN

We have engaged M/s. Environmental and Geo Spatial Solutions, Chennai for conducting Ground Water Survey for one of our ONGC Project at Four sites in different locations of Assam.

We certify that the Ground Water Survey was successfully completed in all four sites & accordingly made Borwells are giving more yield than anticipated. M/s. EGSS predictions are very accurate and we appreciate their dedication and efforts in work.

We specifically convey thanks to Mr. Sivakumar Sr. Hydrogeologist of EGSS for the innovative idea of Rain Water Harvesting design which resulted in recharge of Aquifers at a most difficult location (Borholla, Assam).

Borholla village is located in Titabar District, Assam. This location has shallow aquifers upto 100 meter depth consisting of clay and fine sand. Other wells drilled in this area has given poor yield. Rain fall in this area during monsoon is very good, hence the new well was drilled to 300 meter depth with a recharge provision as suggested by M/s. EGSS. This suggestion was very much successful resulting in sustained yield.

We congratulate the entire team and wish them all success for their future endeavors.

Thanking You

For **HAL Offshore Limited**,
